

Portable Hydraulic Oil Filtration System

This portable hydraulic oil filtration system is designed for removing particulate contamination and water from hydraulic fluids. Featuring a robust construction with handle and wheels, the system ensures optimal fluid cleanliness, which extends the life of hydraulic components and minimizes downtime.

Product Overview

Portable Hydraulic Oil Filtration System

The GF-280D is a professional-grade portable hydraulic oil filtration system engineered to maintain optimal fluid cleanliness. By effectively removing particulate contamination and water from hydraulic fluids, this system helps extend the service life of critical hydraulic components and significantly minimizes operational downtime. Its robust, wheeled design ensures it can be easily maneuvered across various industrial environments.

Technical Specifications

Model Number	GF-280D
Core Functions	Particulate Removal, Water Removal, Fluid Maintenance

Design & Mobility

Mobility Features

- Integrated handle
- Heavy-duty wheels
- Portable design

Build Quality

Robust Construction • Industrial Grade
