

Portable Inverter MIG Welding Machine

This is a portable inverter-based MIG welding machine suitable for light to medium-duty applications. It features adjustable feed speed and voltage controls and integrated meters for monitoring voltage and current.

Product Overview

Versatile Portable Welding Solution

The NBC 200 is a high-performance, portable inverter-based MIG welding machine engineered for light to medium-duty industrial applications. Designed for maximum mobility, it is an ideal choice for on-site welding tasks that require reliability and precision. Operators benefit from integrated controls for feed speed and voltage, along with clear real-time monitoring through built-in digital meters.

Technical Metrics

Operational Metrics

200 A

Rated Output

Core Features

- Inverter-based technology
- Adjustable wire feed speed
- Voltage control system
- Integrated digital voltage and current monitoring
- Standard welding torch connection

Compliance and Usage

Application Scope

Light-duty, Medium-duty, On-site Repair, Portable
