

Portable Inverter MMA Welding Machine

This portable welding machine features advanced high-frequency IGBT inverter technology for improved reliability. It has overheating, over-voltage, and over-current protection.

Product Overview

A highly versatile, portable welding solution designed for efficient performance in diverse environments.

Professional Performance in a Compact Package

The Super Arc-160H is a highly versatile, portable MMA welding machine designed for both professional workshops and on-site repair tasks. It utilizes advanced high-frequency IGBT inverter technology to ensure reliable, high-quality welds across various materials. With its lightweight design and built-in protection features, it provides a safe, efficient, and user-friendly experience for demanding welding applications.

Technical Specifications

Lightweight construction and carrying strap ensure easy transport for on-site projects.

Current Range

30 A Min Current	160 A Max Current
----------------------------	-----------------------------

Operating Voltage	AC220V 50Hz
Duty Cycle	40 %

Features & Technology

User-friendly interface featuring adjustable amperage control and clear setting monitoring.

Safety Protections

- Overheating Protection
- Over-voltage Protection
- Over-current Protection

Core Technologies

IGBT Inverter, High Frequency, Compact Design
