

Portable Line Array System with Subwoofer and Audio Engine

This portable amplification system is designed for musicians, DJs, and public speakers. It features a line array loudspeaker with a B2 bass module and ToneMatch audio engine.

Overview

Professional Portable Line Array System

This portable line array system is engineered to provide 180-degree horizontal sound coverage, ensuring consistent tonal balance throughout any venue. The system integrates a high-performance loudspeaker array with 24 vertically mounted drivers for clear highs, paired with a dedicated bass module for powerful low-end response. Included is a versatile digital multi-channel mixer that offers advanced tone-shaping tools, intelligent EQ, and professional-quality effects to enhance voice and instrument performance.
