

Portable MIG Welding Machine

This is a compact and portable welding machine designed for MIG/MAG welding processes. The control panel allows for precise adjustment of welding parameters, making it suitable for a variety of welding applications.

Product Overview

Versatile MIG/MAG Solution

This portable welding machine is engineered for high-performance MIG/MAG gas-shielded welding operations. Its compact, rugged design with integrated handles ensures excellent mobility for diverse job sites. The unit features an intuitive control panel for precise parameter adjustments, making it a reliable choice for professional welding applications.

Technical Specifications

Model Identifier	NB-200IGBT
Welding Processes	MIG, MAG, CO2 Gas Shielded

Key Features

Design Advantages

- Compact and portable chassis
- Integrated carry handles
- IGBT inverter technology
- Precision control interface
