

Portable MIG Welding Machine

This portable welding machine is designed for MIG/MAG welding processes. It features adjustable feed speed and voltage controls, along with integrated meters for monitoring welding parameters.

Product Overview

Professional Performance in a Portable Frame

The NBC 200 Inverter is a high-performance portable welding machine specifically engineered for MIG/MAG welding processes. Its compact and robust design ensures high portability, making it an ideal choice for diverse industrial welding applications. Equipped with precise controls for feed speed and voltage, this machine provides the versatility and reliability required for professional welding operations.

Technical Specifications

Rated Output Capacity

200 A

Rated Current

Welding Type

MIG, MAG

Control & Interface

Control Features

- Adjustable wire feed speed
- Voltage control dial
- Integrated digital monitoring meters
- Standardized welding torch connection

Construction

Design Classification

Portable • Inverter Technology • Robust Construction
