

Portable MIG/MAG Welding Machine 230V

This compact and portable MIG/MAG welding machine is designed for light to medium-duty applications. It features adjustable welding parameters suitable for various materials and thicknesses.

Overview

Compact Welding Performance

This portable MIG/MAG welding machine is engineered for light to medium-duty welding applications, offering versatility for automotive repair, DIY projects, and light fabrication. Designed for convenience, the unit features fan-cooled operation and thermostatic protection to ensure consistent performance. It supports both flux-cored gasless welding and traditional MIG/MAG welding, making it a flexible solution for diverse metalworking tasks.

Technical Specifications

Output Current Range

30 A

Min Current

155 A

Max Current

Input Voltage	230 V
Duty Cycle	60% at 135A
Supported Materials	Steel, Stainless Steel, Aluminum

Features

Welding Modes

MIG • MAG • Flux (Gasless)

Cooling System	Fan-cooled with thermostatic protection
----------------	---

Included Accessories

Included Items

- MIG Torch (Movable or Fixed)
- Earth Clamp
- Brush/Hammer
- Protective Mask
- Carton Box

Optional Add-ons	Regulator
