

Portable Plunge Router for Woodworking

This portable electric router is designed for woodworking applications. It features a plunge base for controlled depth cutting and is suitable for shaping edges, creating grooves, and cutting patterns in wood.

Overview

Professional Portable Plunge Router

This portable electric router is engineered for precision woodworking tasks, featuring a versatile plunge base that allows for controlled depth cutting. Designed with adjustable handles and a clear base for enhanced visibility, it provides the accuracy needed for shaping edges, creating grooves, and cutting complex patterns. The integrated spindle lock ensures efficient bit changes, making it an essential tool for professional woodworkers.
