

Portable Power Generating Set

This portable generating set is designed for power transmission and distribution applications. Its robust frame includes wheels for maneuverability and a control panel with outlets and gauges for monitoring.

Product Overview

Professional Portable Power Solution

This portable power generating set is engineered for reliability, utilizing a high-performance gasoline engine to deliver consistent power output. Designed for demanding environments, it features an automatic voltage regulator (AVR) and an engine oil warning system to ensure equipment safety and stability. The unit is built for heavy-duty use with a large capacity tank for extended run times and a vibration-dampening mobile chassis for easy site transportation.
