

# Portable TIG Welding Machine

This TIG welding machine is compact and portable, designed for precision welding on various metals. It features adjustable amperage control to ensure optimal welding performance and a stable arc.

## Overview

### Professional Precision Welding

This portable TIG welding machine is engineered for precision joining of various metals, including stainless steel and aluminum. Designed for both professional and high-end DIY applications, it features an advanced DC inverter system that ensures a stable arc and superior welding characteristics. Its compact design allows for easy transport without sacrificing the adjustable control necessary for high-performance results.

## Performance Metrics

### Rated Output Current

**180 A**

Max Amperage

## Technical Specifications

Supported Welding Modes	TIG, MMA
Core Technology	DC Inverter

## Applications

### Compatible Metals

- Stainless Steel
- Aluminum
- Various Alloys
