

Portable Water Jet Cutting Machine for Demolition

This portable water jet cutting machine separates the body from the abrasive tank. Its compact size and optional oil drive make it suitable for small spaces and field operations without a power supply.

Product Overview

Industrial Portable Water Jet Cutting Solution

This portable water jet cutting machine is engineered for safe, high-precision cutting in challenging industrial environments. Designed specifically for the demolition and removal of flammable or explosive objects such as tanks and pipes, it utilizes a non-thermal, ultra-high-pressure water jet process. The system ensures operator safety through specialized protective mechanisms while adhering to strict environmental protection standards.

Key Features

Operational Advantages

- Non-thermal cutting process
- Environmentally friendly operation
- Portable design for field use
- Includes specialized protective user devices
- Compatible with multiple cutting attachments

Application Suitability

Safety Certifications and Applications

Flammable Environment Safe, Explosion-Proof Cutting, Tank Demolition, Pipe Removal, Field-Ready
