

Portable Welder Generator

This portable welder generator is designed for on-site welding and power generation. It features a robust engine coupled with a welding unit and an AC generator.

Overview

Versatile On-Site Power and Welding

The DH190 is a robust, portable welder generator engineered for demanding work environments. It seamlessly integrates a high-performance welding unit with an AC generator, providing both DC welding output and reliable power for essential tools. Designed for durability and ease of use, this unit features a rugged frame construction and an intuitive control panel for precise parameter adjustments.
