

Portable Welding Power Generator

This is a portable welding generator designed for both welding and power generation. It features a robust frame with wheels, a control panel, and is equipped with a fuel tank and engine.

Product Overview

Versatile Power Solution

The Portable Welding Power Generator is a dual-purpose unit engineered for demanding onsite work, offering both high-performance welding capabilities and auxiliary electrical power generation. Designed with a rugged, wheeled frame, this unit ensures high mobility and ease of transport across various work sites. It serves as a comprehensive, self-contained solution for professionals requiring reliable power for welding tasks alongside general electrical equipment operation.

Technical Specifications

Control Panel Components

- Integrated gauges
- Multiple power outlets
- Voltage monitoring
- Distribution controls

Design Specifications

Component	Specification
Engine Type	Internal Combustion
Mobility	Wheeled Chassis
Frame	Robust Tubular Steel

Model Identifier	RZ300ALX-GE
Key Features	Portable, Welding & Power, Heavy Duty Frame, Wheeled Mobility
