

# Positive Displacement Three-Screw Rotary Pump

This positive displacement pump is a three-screw rotary type, suitable for handling various fluids. Its design ensures smooth and pulsation-free delivery, minimizing noise and vibration.

## Overview

### High-Performance Rotary Pumping Solution

The 3GR series positive displacement three-screw rotary pump is engineered for precise and consistent fluid handling across demanding industrial applications. Designed for smooth, pulsation-free delivery, this pump minimizes noise and vibration while maintaining reliable flow rates. Its robust construction ensures durability and longevity, making it an ideal choice for lubrication systems, fuel transfer, and chemical processing tasks.

## Technical Specifications

### Series

3GR Series

### Key Features

- Smooth, pulsation-free delivery
- Low noise and vibration operation
- Robust construction
- Precise flow control

### Pump Type

Positive Displacement Three-Screw Rotary Pump

## Applications

### Suitable Applications

Lubrication Systems, Fuel Transfer, Chemical Processing
