Overview

Road Maintenance Solution

The Pothole Cold Patching Machine (Model HGY5122TYH) is a specialized, self-contained unit designed for efficient road repair. By utilizing advanced composite material technology, it effectively addresses road damages such as local cracks, ruts, and pits. This equipment enhances skid resistance and waterproofing, significantly improving road flatness and traveling comfort for various environments including city streets, community roads, and pedestrian areas.

Technical Specifications

Operational Benefits

- Improves road surface skid resistance
- Enhances waterproof capabilities
- Increases road flatness
- Improves traveling comfort
- Minimizes traffic disruption

Core Components

- Large material storage hopper
- Dispensing system
- Compaction mechanism
- Truck chassis

Model Number

HGY5122TYH

Suitable Applications

Local Cracks, Ruts, Pits, Country Roads, Community Roads, Pedestrian Paving

Safety & Compliance

Safety Features

Reflective Markings • Warning Lights • High Visibility Design
