

# Poultry Feather Removal Machine

This food processing machine is specifically designed for automated feather removal from poultry. It features a cylindrical stainless steel body with strategically placed rubber fingers for efficient feather removal.

## ADDITIONAL IMAGES

## Product Overview

### Efficient Poultry Processing

This industrial-grade poultry feather removal machine is engineered for high-efficiency processing in food production environments. Constructed with a thickened, brushed stainless steel body, it ensures durability and adherence to hygiene standards. The machine utilizes imported rubber strips to effectively remove feathers while protecting poultry skin, supported by a stable, shockproof, and waterproof design.

## Technical Specifications

Construction Material	Thickened stainless steel with brushed surface treatment
Motor Specifications	National standard copper wire motor
Drive System	Belt driving system

## Key Features

Operational Benefits	Shockproof, Waterproof, Non-slip, Quiet Operation, Wear-resistant
Plucking Technology	Imported rubber strips designed for feather removal without skin damage
