

Powder and Granule Vacuum Feeder

This vacuum feeder is a self-contained unit designed for the automatic transfer of powders, granules, and other bulk materials. Constructed from stainless steel, it ensures hygienic operation and easy cleaning.

Product Overview

Professional Vacuum Conveying Solution

The Powder and Granule Vacuum Feeder is a high-performance, self-contained unit engineered for the automatic transfer of bulk materials. Constructed from premium stainless steel, this system ensures hygienic standards essential for sensitive industries like pharmaceuticals and food production. By utilizing advanced vacuum technology, it provides an efficient link between material sources and destination points such as hoppers or packaging lines.

Technical Features

Integrated Monitoring

- Vacuum level pressure gauge
- Adjustable control panel for conveying parameters

Suitable Materials

Powders, Granules, Bulk Materials

Material Construction

Stainless Steel

Industry Applications

Industry Compatibility

Pharmaceutical • Food Processing • Chemical
