

Power Brake Booster Unit

This power brake booster enhances braking performance in vehicles. It uses vacuum or hydraulic pressure to amplify the force applied to the driver to the brake pedal, resulting in reduced effort and improved stopping power.

Overview

High-Performance Vacuum Booster

This Power Brake Booster Unit is engineered to significantly enhance braking performance by amplifying the force applied to the brake pedal. Designed for reliability, it utilizes vacuum pressure to ensure reduced driver effort and improved stopping power. The robust construction and dual diaphragm design make it a critical component for consistent vehicle safety and operation.

Technical Specifications

Diaphragm Configuration

9 inch

Primary Diaphragm

9 inch

Secondary Diaphragm

Booster Design

Dual Diaphragm • Vacuum Assisted

Compatibility & Identification

OE Number	42020.3151-3510010
Compatible Models	UAZ 3151

Construction

Build Features

- Robust metal construction
- Protective rubber boot
- Corrosion-resistant black finish
- Integrated mounting hardware
