

Power Brake Booster

This power brake booster amplifies the force applied to the brake pedal. It uses engine vacuum to provide additional power, reducing the effort needed to stop the vehicle.

Product Overview

Reliable Braking Performance

This vacuum brake booster is a critical component designed to amplify the force applied to the brake pedal, significantly reducing the effort required by the driver. It utilizes engine vacuum to ensure consistent and reliable braking performance. Built with a robust metal housing and protective rubber components, this unit is engineered for durability and efficient operation.

Technical Specifications

Diaphragm Configuration

6-inch • Single Diaphragm

OE Number	2108-3510009
-----------	--------------

Compatibility

Compatible Vehicle Models

- VAZ 2108
- VAZ 2109
- VAZ 2115
- VAZ 21213

Design & Construction

Construction Features	Metal Housing, Rubber Boot Protection, Vacuum Operated
