

Power Converter with Universal Outlets and Surge Protection

This power converter is a reliable solution for telecommunication engineering applications. It includes a surge protection mechanism to safeguard connected devices from voltage spikes.

Overview

Reliable Power Distribution

The DP-3320B power converter is a robust solution engineered specifically for telecommunication applications. Featuring multiple universal outlets, it accommodates a wide range of international plug types while providing essential surge protection to safeguard sensitive equipment from voltage spikes. Its compact, durable design ensures consistent performance and longevity, even in space-constrained environments.

Technical Details

Model Number	DP-3320B
Primary Application	Telecommunication Engineering, Industrial Power

Features

Safety Features

Surge Protection • International Safety Standards Compliant

Design Attributes

- Universal outlet compatibility
- Compact form factor
- Durable construction
