

Power Distribution Panel

This electric panel and cabinet is designed for power distribution and control. It features compartments for housing circuit breakers, switches, and other electrical components, ensuring efficient power management.

Overview

Robust Power Distribution Solution

This electric panel and cabinet is engineered for efficient power distribution and control in demanding industrial and commercial environments. Featuring a robust construction with multiple internal compartments, it provides a secure and organized housing for circuit breakers, switches, and essential electrical components. The design prioritizes safety and reliability, offering a centralized hub for monitoring electrical circuits while ensuring ease of access for maintenance and system upgrades.

Certification Mark

CRS

Design Features

- Robust construction
- Multiple internal compartments
- Centralized power management
- Easy maintenance access

Applications

Industrial, Commercial
