

Power Generation Alternator

This alternator is designed for power generation. It features robust construction with a cylindrical housing, an integrated cooling system, and a terminal box.

Overview

High-Performance Power Generation

The DG series alternator is engineered for reliable power generation across a wide capacity range. Featuring an advanced permanent magnet self-excited system, it ensures stable performance and consistent voltage regulation. Built for heavy-duty industrial applications, this unit incorporates robust construction and efficient cooling systems to maintain operational integrity under demanding conditions.

Technical Specifications

Power Capacity

5 kVA

Minimum Output

2750 kVA

Maximum Output

Key Advantages

- PMI and PMG technology integration
- Reliable excitation without magnetism loss
- High-performance voltage regulation
- Robust industrial construction

Model Series

DG164 - DG734

Excitation Type

Permanent Magnet, Self-excited

Regulation System

High-performance automatic pressure regulation
