

Power Operated Workshop Press

This power-operated hydraulic workshop press is designed for heavy-duty industrial applications. It features a robust steel frame construction for durability and stability.

Product Overview

Industrial Hydraulic Workshop Press

This power-operated hydraulic workshop press is engineered for demanding industrial environments, featuring a robust steel frame for maximum stability and durability. It is designed to deliver precise pressing force for a wide range of metal forming tasks, including bending, straightening, and pressing. With its adjustable work table and controlled hydraulic operation, this machine provides the versatility and reliability required for professional manufacturing and repair facilities.

Technical Specifications

Model Number	JMDYy100/30
Operation Type	Power-operated hydraulic

Features & Capabilities

Suitable Applications

- Automotive repair shops
- Metal fabrication facilities
- Manufacturing plants
- Bending
- Straightening
- Pressing

Key Features

Robust steel frame, Adjustable work table, Controlled operation, Overload protection, Emergency stop
