

Power Plant Facility

This is a large-scale power generation plant. The facility includes multiple cooling towers and smokestacks.

Project Overview

Large-Scale Power Infrastructure

This professional-grade power plant facility represents extensive experience in the field of electric power project design and construction. With an proven track record of successful large-scale project completions, these facilities are designed to meet rigorous national energy standards. The infrastructure is built for high-capacity power generation, providing reliable service and operational excellence for large-scale energy requirements.

Total Installed Capacity

50260 MW

Capacity

Technical Standards

Market Influence

Accounts for approximately 10% of total national installed power generation capacity.

Quality Certifications

Excellent Rated Project, National Standard Compliant
