

Power Plant Project 2x1000MW Capacity

This project involves a power plant with a capacity of 2x 1000MW. The plant includes cooling towers and a chimney, and it is located near water.

Project Overview

Industrial Power Generation Solution

This large-scale power plant project offers a significant installed capacity of 2x1000MW. Designed to support national grid requirements, the facility incorporates advanced engineering solutions for massive power generation. The project demonstrates high-capacity infrastructure capabilities suitable for regional or national energy demands.

Technical Specifications

Total Installed Capacity

2000 MW

Total Power Output

Configuration

2 x 1000MW Units

Project Standards

Project Status

High-Capacity Utility Scale • Completed Construction
