

Power Plant Unit Installation

Power plant unit installation services are offered for setting up power generation facilities. These services ensure seamless integration and optimal performance of the units.

Project Overview

Power Plant Unit Installation

This project involved the comprehensive installation and commissioning of power generation units, specifically focusing on the 3# and 4# units. Both units successfully completed their 168-hour trial operation periods in 2006, achieving the milestone of two units commissioned within a single year. Following installation, both units have demonstrated full-capacity performance with excellent economic indicators.

Industry Sector

Power Engineering, Foreign Engineering Contracting

Performance Metrics

Unit Capacity

300 MW

Capacity per Unit

Trial Operation Status

168 Hours Completed • Full Capacity Operational

Project Milestones

Commissioning Timeline

Unit Identifier	Trial Completion Date
Unit 3#	July 10, 2006
Unit 4#	December 19, 2006
