

PPR Check Valve for Plumbing Systems

This check valve is made from polypropylene random copolymer (PPR). It is designed for use in hot and cold water distribution systems.

Product Overview

High-Performance PPR Plumbing Solutions

This range of polypropylene random copolymer (PPR) components is engineered for reliable hot and cold water distribution systems. Designed for durability and leak-proof performance, these fittings are suitable for both residential and commercial infrastructure. The system includes a comprehensive selection of valves and connectors to accommodate diverse installation requirements.

Technical Details

Material	Polypropylene Random Copolymer (PPR)
Color	Green
Applications	Hot Water Distribution, Cold Water Distribution, Residential Plumbing, Commercial Plumbing

Component Variety

Included Components

- Check Valves
- Ball Valves
- Couplings
- Elbows
- Tees
- Caps
- Unions

Installation

Connection Types

Threaded Joints • Solvent Weld Joints
