

Pre-Engineered Steel Building

This is a pre-engineered steel building (PEB) commonly used for industrial or commercial purposes. It features a metal roof and wall cladding system, providing a durable and weather-resistant enclosure.

General Overview

Industrial Pre-Engineered Steel Building

This pre-engineered steel building is designed for high-performance industrial and commercial applications. The structure utilizes a robust steel frame system, enabling large open-span interiors that are ideal for manufacturing, warehousing, and distribution centers. Built with a focus on durability, it includes a weather-resistant metal roof and wall cladding system.

Construction Details

Structural System	Steel frame for structural support
Cladding & Roofing	Metal roof and wall cladding system

Design & Aesthetics

Exterior Finish	Red panels, Gray panels
-----------------	-------------------------

Integrated Systems

Integrated Utilities

- Ventilation
- Lighting
- Access systems

Applications

Primary Applications

Manufacturing • Warehousing • Distribution Centers
