

Pre-Insulated Wire Terminals

These pre-insulated terminals are designed for creating secure and reliable electrical connections. The terminals feature a metal conductor crimped into an insulated sleeve, offering both electrical conductivity and insulation.

Product Overview

Professional Electrical Connectivity

These pre-insulated wire terminals are engineered for secure and reliable electrical connections in demanding environments. Featuring a high-quality metal conductor crimped into an insulated sleeve, they ensure both excellent conductivity and necessary electrical isolation. These components are essential for maintaining durable connections in industrial, automotive, and panel wiring applications.

Technical Specifications

Key Performance Features

- Integrated electrical insulation sleeve
- High-conductivity metal conductor
- Corrosion-resistant construction
- Designed for secure crimp applications

Available Form Factors

Ring Terminals, Spade Terminals

Application

Ideal Use Cases

Electrical Panels • Automotive Wiring • Industrial Machinery
