

Pre-Packed Ceramic Sand Control Pipe Screens

Pre-packed ceramic sand control pipe screens prevent sand from entering the wellbore, ensuring efficient and reliable oil and gas production. These screens feature a multi-layer filtration system, incorporating a ceramic filtration layer that effectively blocks sand particles while allowing fluids to flow freely.

Product Overview

Professional Sand Control Solutions

These pre-packed ceramic sand control pipe screens are engineered to prevent sand ingress in wellbore applications, ensuring efficient and reliable oil and gas production. Featuring a multi-layer filtration system with a ceramic layer, they effectively block sand particles while maintaining optimal fluid flow. Designed for durability in challenging downhole conditions, these screens offer superior sand control and help extend the lifespan of your well equipment.

Technical Specifications

End Connections

- Welding ring
- Thread coupling
- Flange

Material Grades	SS201, SS304, SS304L, SS316, SS316L, Carbon Steel Q195
Diameter Range	30 mm
Unit Length	6 m
Slot Size	0.1 mm

Compliance & Standards

Standards

DIN4935 • API 5CT • SL154-2013 • DIN • GB • ISO • JIS

Certifications	ISO9001, SGS, BV
