

Pre-terminated Copper Trunk Cable Assembly with RJ45 Connectors

This copper trunk cable assembly includes either 6 or 12 pre-terminated cables on both ends. It facilitates rapid connection to distribution frames, which reduces installation time.

Overview

High-Performance Trunking Solution

This pre-terminated copper trunk cable assembly is engineered for high-density data center and enterprise network environments. It simplifies infrastructure deployment by providing multiple RJ45 connections in a single, organized assembly, significantly reducing installation time. With integrated shielding to combat electromagnetic interference, this cable ensures superior signal integrity for critical networking hardware.

Technical Specifications

Connector Type	RJ45
Shielding	Yes
Protective Construction	Braided sleeve

Applications

Key Operational Benefits

- Rapid deployment through pre-terminated design
- Simplified cable management in high-density zones
- Enhanced durability and strain relief
- Optimal signal integrity against EMI

Typical Applications	Data Centers, Enterprise Networks, Patch Panel Connection, Switch Interconnects, Server Connectivity
