

Precision Brass Needle Valve for Cleaning Machines

This precision-engineered brass fitting is designed for precise control of fluid or gas flow in cleaning machinery. It features threaded male connections for secure installation and a knurled adjustment knob for fine-tuning flow rates.

Product Overview

Precision Flow Control

This precision-engineered brass needle valve is designed specifically for integration into cleaning machinery systems. Featuring a knurled adjustment knob, it allows for fine-tuning of fluid or gas flow rates to meet demanding operational requirements. The robust brass construction ensures long-term durability and resistance to corrosion in industrial cleaning environments.

Technical Specifications

Key Features

- Knurled adjustment knob for precision
- Threaded male connections
- Corrosion-resistant construction

Material Composition	Brass
Primary Application	Cleaning Machinery, Fluid Control, Gas Control
