

Precision Cutting Machine with Sliding Table

This precision cutting machine is equipped with a sliding table for accurate and efficient material processing. It features a robust frame, adjustable cutting depth, and a safety guard for operator protection.

Overview

Precision Cutting Machine

This precision cutting machine features a sliding table designed for highly accurate and efficient material processing. Built with a robust frame, it ensures stability during operation while providing adjustable cutting depth for versatile applications. It is equipped with a safety guard to prioritize operator protection, making it an ideal solution for woodworking and similar industrial tasks requiring exact cuts.

Technical Specifications

Primary Applications

- Woodworking
- Material Processing
- Precision Cutting

Model Number	BJC1128M1
Key Features	Sliding Table, Adjustable Cutting Depth, Robust Frame, Safety Guard
