

Precision Diamond Grinding Wheel

Precision diamond grinding wheel designed for high-performance cutting and grinding applications. It features even distribution of diamond particles for consistent material removal and extended wheel life on ceramics, glass, and hard metals.

Product Overview

Precision Engineering for High Performance

The SM300 diamond grinding wheel is engineered for high-performance cutting and grinding applications. Its durable design features evenly distributed diamond particles that ensure consistent material removal and an extended service life. This tool is optimized for efficiency, incorporating advanced features for superior cooling and swarf removal during intensive operations.

Performance Metrics

Compatible Materials

Ceramics, Glass, Hard Metals

Design and Compatibility

Model ID

SM300

Technical Advantages

- Evenly distributed diamond particles
- Optimized for thermal management
- Enhanced swarf removal
- Extended operational life

Mounting System

Central mounting plate with multi-bolt hole pattern
