

Precision Engraving and Etching Machine

This precision engraving and etching machine is designed for detailed material processing. It features multiple output ports for varied applications, an Ethernet interface for network connectivity, and a robust power supply.

Product Overview

Precision Engraving and Etching Capability

This precision engraving and etching machine is engineered for high-detail material processing, making it an ideal solution for both industrial manufacturing and artistic applications. It features a robust power supply and comprehensive connectivity options, including an Ethernet interface for seamless network integration. Designed with versatility in mind, the unit supports a wide range of output configurations to accommodate varied engraving tasks.

Technical Specifications

Power Supply	DC12V
Connectivity	Ethernet, Console
Output Ports	16 ports
Model Identification	AnyShow 302

Features

Suitable Applications

- Industrial engraving
- Artistic etching
- Detailed material processing
