

Precision Grey Iron Casting

This precision-engineered grey iron casting is designed for robust performance. It features a complex internal geometry with mounting flanges, suitable for mechanical power transmission and motion control systems.

Overview

Precision-Engineered Grey Iron Casting

This precision-engineered grey iron casting is designed for robust performance in demanding industrial applications. Featuring a complex internal geometry with a central circular recess and a keyway slot, it is ideally suited for mechanical power transmission or motion control systems. The component includes integrated mounting flanges and a through-hole, ensuring secure and accurate integration into larger mechanical assemblies.

Technical Specifications

Material	Grey Iron
Design Features	Internal Keyway Slot, Central Circular Recess, Mounting Flanges, Through-hole Integration

Application

Primary Application	Mechanical power transmission and motion control systems
