

Precision Laser Engraving Machine

This precision laser engraving machine is designed for cutting and engraving a variety of materials. It features a large working area, precise laser control, and user-friendly software for creating intricate designs.

Overview

Precision Laser Engraving Excellence

The LC1280 is a high-precision laser engraving machine engineered for versatile cutting and engraving tasks across various materials. Designed for reliability and accuracy, it features a robust construction suitable for professional manufacturing, rapid prototyping, and detailed project work. With adjustable power settings and variable speed controls, it offers the flexibility needed to achieve optimal results for intricate designs.

Technical Specifications

Key Performance Metrics

1280

Model Series

Model	LC1280
Safety Features	Safety Interlock System, Integrated Cooling System

Operational Capabilities

Control Features

- Adjustable power settings
- Variable speed controls
- User-friendly software interface

Primary Applications

Manufacturing • Prototyping • Hobbyist Projects
