

Precision Machined Metal Component

This precision-machined metal component features a multi-tiered design with mounting holes. It is suitable for mechanical applications requiring precision and durability.

Product Overview

Precision-Engineered Mechanical Component

This precision-machined metal component is designed for high-performance mechanical applications. Utilizing advanced CNC machining centers and high-speed carving technologies, it ensures tight tolerances and superior structural integrity. It is an ideal solution for industries requiring complex, non-standard parts, including automation, communication, medical equipment, and assembly line systems.

Manufacturing Capabilities

Suitable Industries

- Automation Equipment
- Communication Systems
- Medical Devices
- Mechanical Assembly Lines
- Electronics

Processing Techniques

CNC Machining, CNC Milling, CNC Turning, Internal Grinding, External Grinding, Line Cutting

Technical Specifications

Production Scope

Precision Parts • Non-standard Parts • Molds • Fixture Design
