

Precision Machined Metal Component

This precision machined metal component features a threaded end and grooved cylindrical body. It is constructed from high-grade steel, ensuring durability and corrosion resistance for use in manufacturing, automotive, and engineering industries.

Product Overview

Precision Engineered Component

This precision machined metal component is expertly crafted for demanding industrial environments, including hydraulic and pneumatic systems. Constructed from high-grade steel, it offers exceptional durability and superior corrosion resistance for long-term reliability. Its design features precise threading and tight tolerance dimensions, ensuring secure, leak-proof connections in critical manufacturing, automotive, and engineering applications.

Technical Specifications

Material	High-grade Steel
Surface Finish	Smooth
Key Design Features	Threaded End, Grooved Cylindrical Body, Leak-proof Design, Tight Tolerance

Applications

Suitable Industries

- Manufacturing
- Automotive
- Engineering
- Hydraulic Systems
- Pneumatic Systems
