

Precision Machined Metal Component with Star Recess

This is a precision-machined metal component. It features a star-shaped recess and a central hole.

Product Overview

Precision Engineering

This precision-machined metal component is designed for demanding industrial applications requiring high accuracy and reliability. Featuring a distinctive star-shaped recess and central aperture, the part is engineered for seamless integration into specialized tooling or assembly systems. Its robust construction ensures consistent performance under operational stress, making it an ideal choice for high-precision manufacturing environments.

Technical Specifications

Geometry	Rectangular base with angled sides
Recess Type	Star-shaped recess
Surface Appearance	Gold-tone finish, Precision machined

Compliance & Quality

Category

Machining Insert • Tooling Component
