

Precision Machinery Components

These precision-engineered components are designed for various industrial applications. The series includes guide blocks, gears, shift forks, conical rings, oil baffles, and double chain rings, suitable for use in a wide range of machinery and equipment.

Product Overview

Precision-Engineered Industrial Components

This series of high-quality machinery components is designed to meet rigorous industrial standards for performance and durability. The collection encompasses a wide range of essential parts, including guide blocks, specialized gears, shift forks, conical rings, and oil baffles. These precision components are engineered to provide optimal reliability across various heavy-duty machinery and equipment applications.

Product Components

Component Inventory

- Guide blocks (1st and 2nd gear)
- Sprockets
- Reverse gear shift fork assemblies
- Conical rings (0.9-1.2m range)
- Oil baffles
- Double chain rings

Quality and Standards

Quality Compliance

Precision Engineered, High Durability, Industrial Grade

Technical Specifications

Size and Compatibility

Component Type	Specification Range
Conical Rings	0.9m - 1.2m
Shift Fork	Reverse Gear Assembly
