

Precision Metal Stamping Parts

Precision metal stamping parts are manufactured using stamping dies. These components are suitable for various electromechanical applications and designed for daily use.

Product Overview

Precision Stamping Excellence

These precision metal stamping parts are manufactured through an integrated, one-stop solution utilizing advanced CAD/CAM/CAE design and high-precision machinery. With a commitment to quality, every component undergoes strict monitoring in accordance with ISO9001-2008 standards to ensure stable performance. Our facility supports high-volume output and rapid delivery, providing both standardized and fully customized components to meet diverse industrial requirements.

Manufacturing Capabilities

Annual Output Capacity

30 trillion units

Total Output

Press Capacity

200 tons

Quality & Standards

Quality Control Tools

- Fischer Coating Thickness Gauge
- OGP Image Measurement Instrument

Certifications

ISO9001-2008

Applications

Typical Applications

- Wall switches and sockets
- Miniature circuit breakers
- Mould-case circuit breakers
- Alternating current contactors
- Auto parts
