

Precision Metal Stampings for Electronics

These precision metal stampings are designed for use in electronic devices and rechargeable systems. The components vary in size, shape, and material finish, and are manufactured to tight tolerances.

Product Overview

Precision Metal Stampings for Electronics

These precision metal stampings are engineered for high-performance electronic assemblies and power systems. Designed with tight manufacturing tolerances, they ensure reliable conductivity and structural integrity in critical applications. These components are ideal for use in rechargeable systems, battery contacts, and intricate electronic connectors.

Technical Specifications

Primary Applications

- Battery Contacts
- Electronic Connectors
- Rechargeable System Components
- PCB Assemblies

Material & Finishes

Metallic Finish, High-Tolerance, Conductive Material

Quality & Standards

Manufacturing Standard

Precision Engineered • Tight Tolerances
