

Precision Microtome for Sample Preparation

This high-precision instrument is used for preparing extremely thin slices of materials for microscopic analysis. It features a binocular viewing system, a precise cutting mechanism with adjustable controls, and an integrated display screen.

Product Overview

Precision Microtome for Sample Preparation

This high-precision microtome is engineered for the preparation of extremely thin slices of materials, essential for accurate microscopic analysis. Designed for professional use in fields such as materials science, biology, and nanotechnology, the instrument features a sophisticated cutting mechanism and a binocular viewing system. Its robust construction ensures consistency and reliability in demanding research and laboratory environments.

Key Features

Advanced Capabilities

- High-precision cutting mechanism
- Integrated binocular viewing system
- Adjustable cutting controls
- Integrated digital display for process monitoring

Primary Applications

Materials Science, Biology, Nanotechnology, Sample Preparation

Technical Specifications

Build Quality

Robust Construction • Professional Grade

Instrument Type

Precision Microtome
