

Precision Outside Micrometer

This precision outside micrometer features a painted frame for enhanced durability and corrosion resistance. It measures external dimensions with high accuracy, offering reliable performance for various engineering and manufacturing applications.

Product Overview

Precision Outside Micrometer

This precision outside micrometer is designed for accurate measurement of external dimensions in various engineering and manufacturing environments. Featuring a painted frame, it offers enhanced durability and superior corrosion resistance for long-term reliability. Available in multiple measurement ranges, it provides consistent performance with a high resolution of 0.01mm.

Technical Specifications

Available Measurement Ranges

- 0-25mm
- 25-50mm
- 50-75mm
- 75-100mm

Resolution	0.01 mm
Model Identifier	EK-1604

Design & Construction

Frame Finish	Painted
Frame Features	Corrosion Resistant, Enhanced Durability
