

Precision RF Connectors and Cable Assemblies

Precision RF connectors and cable assemblies are engineered for high-frequency applications. They feature gold-plated contacts to ensure optimal signal transmission and corrosion resistance.

Product Overview

Precision RF Connectivity Solutions

These precision-engineered RF connectors and cable assemblies are designed for high-frequency applications, ensuring optimal signal transmission and superior corrosion resistance. With 10 years of industry expertise, the components are suitable for integration into wireless communication systems, test equipment, and other demanding electronic environments. Each unit is manufactured under a strict ISO 9001:2000 quality control system to ensure high performance and low defect rates.

Technical Standards

Certifications	ISO 9001:2000
QC System	Strict QC system in place for minimized defective ratios.

Capabilities

Engineering & Customization

- OEM project support
- Customized sub-assembly services
- Precision hardware manufacturing
- 10 years of export experience

Product Features

Key Features

Gold-plated contacts • High-frequency compatible • Corrosion resistant • Flexible coaxial design
