

Precision Vernier Caliper for Dimensional Measurement

This vernier caliper is designed for accurate measurements in engineering and quality control. It allows for direct readings, typically down to 0.02mm, and is constructed from hardened stainless steel for durability.

Product Overview

Precision Vernier Caliper

This high-precision vernier caliper is an essential tool for accurate dimensional measurement in engineering, machining, and quality control. Constructed from hardened stainless steel, it ensures durability and resistance to corrosion in demanding workshop environments. It provides versatile measurement capabilities, including external, internal, depth, and step dimensions, with a dual-scale display for both metric and imperial units.

Measurement Specifications

Metric Measurement Range	150 mm
Imperial Measurement Range	6 in
Accuracy (Metric)	0.02 mm
Accuracy (Imperial)	0.001 in

Product Features

Measurement Modes	Outside Diameter, Inside Diameter, Depth, Step
Construction Material	Hardened Stainless Steel
Storage	Protective storage case included
