

Precision Wheel Balancing Machine

This precision wheel balancer is designed for accurate and efficient wheel balancing. It features static and dynamic balancing modes, multiple alloy settings, self-calibration, and a user-friendly interface.

Overview

High-Precision Wheel Balancing

This professional-grade wheel balancing machine is engineered for exceptional accuracy and operational efficiency in automotive repair environments. It supports both static and dynamic balancing modes, accommodating a wide range of wheel types and sizes to eliminate vibration and ensure optimal vehicle performance. Designed with a user-friendly interface and self-calibration features, it simplifies the workflow while maintaining high-standard balancing results.

Key Features

Advanced Functions

- User-friendly digital interface
- Self-adhesive weight position detection
- Compatibility with various alloy rim types

Core Balancing Modes

Static Balancing, Dynamic Balancing, Alloy Settings
