

Precision Wood Panel Saw

The BJC1132F and BJC1138F are precision panel saws designed for woodworking applications. These saws provide accurate and clean cuts on various panel materials, featuring a sliding table for smooth material feeding and adjustable cutting angles.

Overview

Precision Wood Panel Saw

The BJC1132F and BJC1138F precision panel saws are engineered for demanding woodworking applications, providing accurate and clean cuts on various panel materials. Featuring a sliding table for smooth, controlled material feeding, these machines ensure precise dimensions while minimizing chipping. Built with powerful motors and robust construction, they offer long-term reliability and versatility for professional woodworking environments.

Performance

Safety Features

Operator Protection • Safety Integrated

Key Capabilities

Precision Cutting, Sliding Table, Adjustable Angles, Heavy Duty
