

Preserved Specimen in Glass Jar for Research

This preserved specimen is contained within a glass jar, making it suitable for research or educational use. The jar includes a translucent liquid and a mass of organic material, along with a label for detailed sample information.

Product Overview

Professional Research Specimen

This preserved specimen is contained within a high-quality glass jar, designed specifically for laboratory research, educational demonstration, or chemical analysis. The unit features a secure, clear vessel suitable for long-term storage of organic matter or tissue samples. It is an essential tool for biological studies and chemical research environments requiring stable, preserved specimens.

Technical Details

Packaging

Glass Jar • Liquid Preserved

Label Code

25/36

Material Type

Micro-photolysis adhesive (>@lãö)

Application

Intended Use

Laboratory Research, Educational Demonstration, Biological Study
